# Welcome to IPv6

# IPC\_121d | On-Demand | Transport | Express

Course Duration: 1 hour

As the communications industry transitions to wireless, wireline converged networks to support voice, video, data and mobile services over IP networks, a solid understanding of IP and its role in networking is essential. IP is to data transfer as a dial tone is to a wireline telephone. IPv6 was defined in 1998 but saw little adoption for over a decade. With continued IPv4 address depletion and the migration to wireless VoIP in LTE networks, the time for widespread adoption has finally arrived. This course begins with a look at the motivation for migrating to IPv6, followed by an explanation of the IPv6 header and addressing concepts, and the 128-bit address necessitates changes to many of the supporting protocols for IP.

#### **Intended Audience**

This course is intended for technical personnel with a grounding in IPv4 networks who are seeking a technical overview of IPv6 and related protocols.

### **Objectives**

After completing this course, the student will be able to:

- Describe why the migration to IPv6 is finally happening
- List the key benefits of IPv6
- Explain key fields in the IPv6 header
- Discuss how IPv6 addresses are formatted and how they are assigned
- Explain how the basic IP supporting protocols are enhanced to support IPV6
- Describe how automatic routing for IPv6 networks is enabled by BGP and OSPF
- Discuss how dual stack devices help ease the transition from IPv4 to IPv6
- Understand the differences between configured and automatic tunnels for IPv6 transition

## **Course Prerequisites**

No Prerequisites

#### **Outline**

- 1. Motivation and Benefits
- 1.1 IPv4 address depletion
- 1.2 Limitations of NAT
- 1.3 Benefits of IPv6
- 2. IPv6 Header and Addresses
- 2.1 Header format
- 2.2 Address format
- 2.3 Address notation
- 2.4 Types of addresses
- 2.5 Address assignment
- 3. Supporting Protocols
- **3.1 ICMP**
- 3.2 DNS
- **3.3 DHCP**
- **3.4 OSPF**
- 3.5 BGP
- 4. Transition to IPv6
- 4.1 The transition problem
- 4.2 Dual stack
- 4.3 Configured tunneling
- 4.4 Automatic tunneling
- 4.5 IPv6 in LTE
