

RF Design Workshop: Part 1 - LTE

Instructor Led | Duration: 2 Days | Course Number: LTE_415

4G LTE

LTE offers significant improvements over previous mobile wireless systems in terms of data speeds and capacity, through the use of technologies such as OFDMA and multiple antenna techniques. However, these gains are realized only with careful planning and design in the LTE Radio Access Network (RAN), to maximize the efficiency of available RF spectrum. This hands-on workshop guides participants through the theory and practice of RF design for LTE RANs. Participants will apply their understanding of the LTE air interface physical structure and related concepts to calculate the link budgets to support the market coverage and performance requirements. Participants will use coverage prediction tool for exercises to apply their knowledge and skills to real-world scenarios.

Intended Audience

This workshop is intended for LTE RF design and system performance engineers.

Learning Objectives

After completing this workshop, the student will be able to:

- Apply a consistent process to radio network design
- Use RSRP and RSRQ measurements to assess LTE RAN RF performance
- Map network requirements to corresponding system parameters
- Construct uplink/downlink link budgets to meet specific performance requirements
- Use coverage and capacity requirements to determine the optimal radio network design
- Exploit multiple antenna techniques to optimize coverage and performance

Required Equipment

- PC laptop with administrator privileges

Suggested Prerequisites

- [TRND103] Overview of OFDM (eLearning)
- [LTE_102] LTE Overview (eLearning)

Course Outline

1. Overview of LTE Radio Network Design

- 1.1. Radio network design goals
- 1.2. Planning inputs and outputs
- 1.3. LTE RAN planning process

2. LTE Air Interface

- 2.1. E-UTRAN architecture
- 2.2. LTE Physical layer structure
- 2.3. Air interface resources
- 2.4. UE measurements (RSRP/RSRQ)
- 2.5. RSRP/RSRQ exercises

3. Market and Engineering Requirements

- 3.1. Coverage requirements
- 3.2. Capacity requirements
- 3.3. QoS requirements
- 3.4. Engineering requirements

4. LTE Link Budget

- 4.1. Cell edge throughput calculations
- 4.2. Link budget for UL and DL
- 4.3. Role of RRH and TMA
- 4.4. UL/DL link budget exercises

5. RF Design and Site Selection

- 5.1. RF design process and options
- 5.2. Morphology definitions
- 5.3. Propagation models
- 5.4. RF design tool configuration
- 5.5. Coverage prediction

6. Antennas in LTE Networks

- 6.1. Multiple antenna techniques
- 6.2. Downlink feedback (CQI/RI/PMI)
- 6.3. Deployment considerations
- 6.4. Coverage prediction exercises
