

# Technology Primer: Containers and Microservices in Telecom

4.3/5 "The instructor made sure we were engaged through the whole training and he made sure it was always interesting."

Many forward-looking leaders recognize that the technological functions we use on a daily basis can be virtualized and moved to a cloud computing environment. This class surveys the topic of containers and microservices along with their applications and their implementations used in the industry. The student will learn about the concept of containers and microservices as well as their use cases and landscape.

## Intended Audience

A high-level technical overview to personnel involved in product management, marketing, planning, design, engineering, and operations.

## Objectives

After completing this course, the student will be able to:

- Differentiate between light weight and heavy weight virtualization
- Describe software container
- Describe key use cases for software containers
- Describe key use cases for software micro-services
- Identify the key container life-cycle management concepts
- Step through the examples of uses of micro-services

## Prerequisites

- Technology Primer: Cloud and Virtualization (Instructor Led)
- Technology Primer: NFV (Instructor Led)

## Required Equipment

- None

## Course Outline

### 1. Introduction to Containers

- 1.1 Types of virtualization
- 1.2 Container architecture

### 2. Container Landscape

- 2.1 Technology landscape
- 2.2 Use cases

### 3. Container and Microservices

- 3.1 Microservice architecture
- 3.2 Microservices use cases

### 4. Container Orchestration

- 4.1 Container Orchestration landscape
- 4.2 Container life-cycle management

### 5. Putting It All Together

- 5.1 Container example
- 5.2 Microservice example
